

EUKN – ‘One stop shop for the urban professional’

Michel Visser

e-mail: michel.visser@minbzk.nl

UNITAR-workshop 1-4 October Plock

EUKN in short

- EUKN connects existing urban knowledge centres and networks
- EUKN offers knowledge of high quality

Target group: practitioners, decision- and policymakers

EUKN: one stop-shop for end-users!

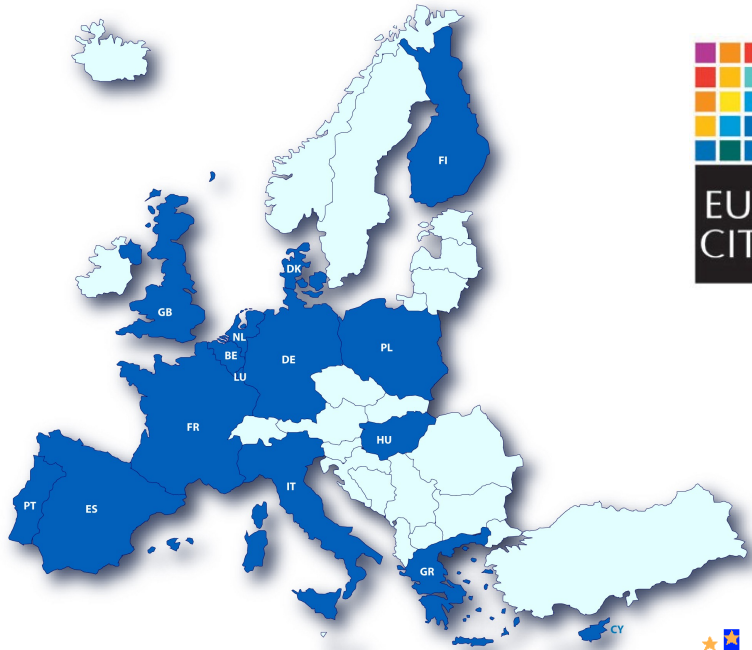

Background

- Start: ministerial conference Rotterdam 30 november 2004
- 15 member states, European Commission. URBACT and Eurocities

The network connects 15 Member States, EUROCITIES and URBACT

- Launch 27 October 2005
- 15 NFP websites
- English website & multilingual search
- 500-700 visitors per day
- > 1500 knowledge documents

Themes:

- Urban environment
- Housing
- Transport and infrastructure
- Economy: knowledge & employment
- Social inclusion and integration
- Security and crime prevention

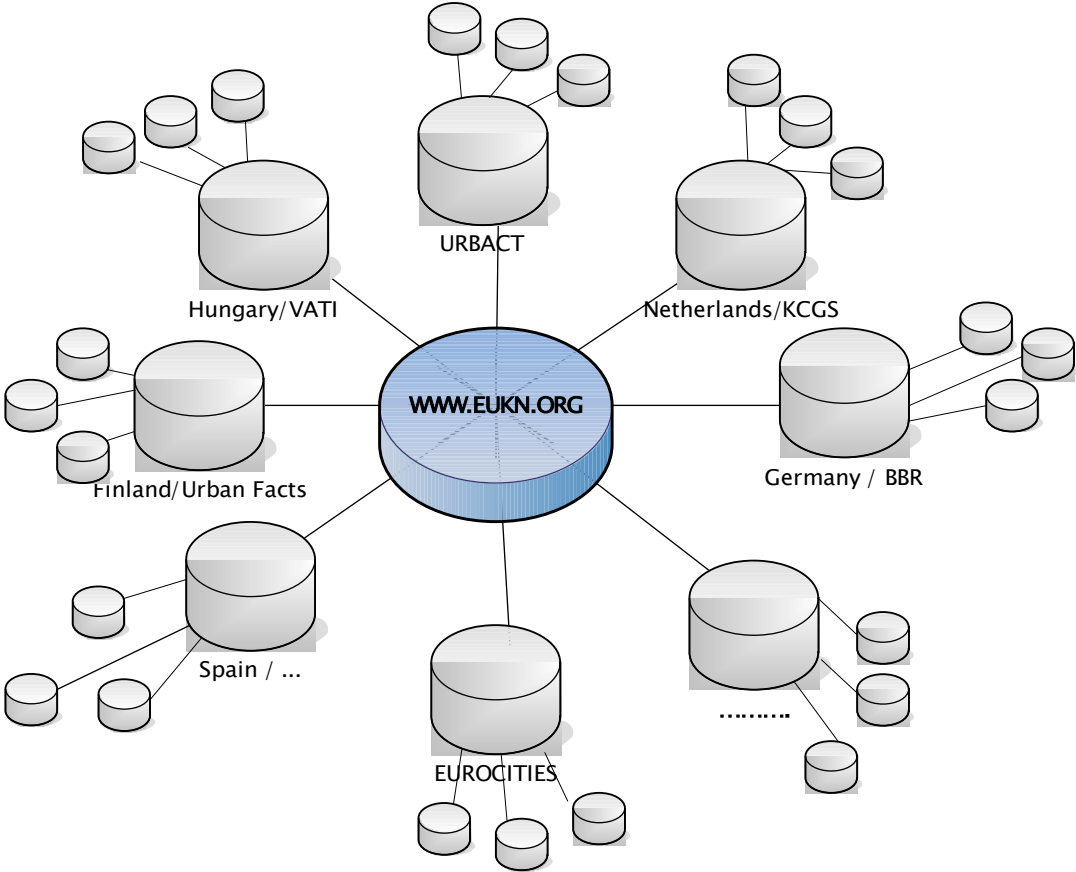

Organization

- EUKN–secretariat: website, support national focal points, etc.
- EUKN–Steering Group
- National Focal Points: ‘a binding pin’ in each member state.

National Focal Points

Content EUKN– 3 types of documents

1. Best and proven practices
2. Research results
3. Policy documents

All documents are validated, contain templates in English and provide contact info of relevant policymakers and practitioners

Urban transportation as a new regulatory tool for future cities

Introduction

This study employs a comparative analysis of two metropolitan areas, the region of Paris (France) and the Shanghai agglomeration (China), where recent political choices of urban transportation speed are selected as the main studied cases.

Description

The urban transportation speed constitutes an effective regulatory instrument for public politics so that its integration into the urban planning procedure would contribute to the coherence between spatial development and transportation policies thus reinforce the role of urban planning in urban management.

Background information

This paper aims to research the urban transportation speed that constitutes an effective regulatory instrument for public politics so that its integration into the urban planning procedure can contribute to the coherence between spatial development and transportation policies thus reinforcing the role of urban planning in urban management.

Conclusions

The comparative analyses between Shanghai and Paris confirm that speed can be a potential urban planning tool or more generally a public regulatory lever. Producing direct effects in all urban dimensions, the regulation of speed presents an efficient measure for achieving certain political targets. Analyzing its different consequences is helpful for identifying the defects of political orientations. Moreover, the speed constitutes a communication tool favourable for establishing the dialogue among different actors. Integrating the speed regulation into urban planning will contribute to the coherence between urban transport and land use both in every day management and in development projects.
